Charlie Meck listed the Zebra Midge as one of his top 10 flies a few years ago. I had never used one before. I tied some up, 18-24, and it is now one of my top 10 flies by far. Mostly about a 20 I would say, but sometimes I don't really know what size they are. I have them lined up in my nymph box and grab one that is not too big, not too small. I have fished them deep behind another nymph with an indicator quite successfully. I only tied up black with gold head, gold wrap. Not sure if I am missing something there.
