Curious as to what you guys use or recommend for tying. I currently use your basic desk lamp with a 60 watt bulb.

I'm looking for something that has a longer reach, so it doesn't need to be so close to where I'm tying, and better illumination.

Was at the HD today and all they have is something you might find on a 6th grader's desk.

Basically I'm looking for something that helps me tie better flies and catch more fish. 🐟
