This will sound silly, perhaps, but try to imagine you are 2 feet tall and the stream is about 3 times as large. Then, just fish it like you would the larger stream. The thing that takes the most getting used to is that fish in small streams will live in very shallow water, so just because a stream section averages a depth of 12 inches, don't walk by. Look for the same kind of features you would look for in the stream 3 times as large-- that rock as big as a softball in the small creek plays the same role as the boulder in the large stream....
