tomgamber,

When I said they don't telescope to "any" length, I meant variable lengths. Each rod has a specific length and is designed to be fished when fully extended (11' for one model, 12' for the others).

Ahhhhhhh..got it...I think it'd be cool to build a hollow hiking staff with one of these hidden in it. I don;t think I'd buy something like this for the outright purpose of fishing this way but I like anything you can pack away and have handy, just in case.
