I grew up a mi. from the Pickering and have fished it since the sixties. Never saw any evidence of stream bred fish. However, I talked to a couple different anglers over the years that did catch them in some of the feeders, Pigeon Run, Lower Pine, and I think Hartman Run, which happens to dump into the Spec. Regs section. It is unlikely the Pickering will suddenly start pumping out stream bred fish in my opinion. It runs much shallower than it used to and the sediment problem isn't getting any better. It is encouraging to encounter locally reared fish, though.
