I guess it is no good then based on what I'm hearing. The 30-40 trout per outing in each of the last 4 years, including Fall season, after the long HOT summers are obviously proof that the fingerlings could NOT survive... or maybe, i know how to fish...? There's a thought...

I guess we'll never know the benefits of successful fingerling stocking now that it has been changed and is loaded with stocked adults, that by the way, draw everybody and their brother to the "stocked" waters...

I hope the commission re-thinks this one b/c they are missing the boat big time! btw, everyone I've talked to stream side so far this spring have agreed with my sentiments... - so I have no idea where the commission was getting it's survey results..
