Thanks for the tips guys. Ive talked to the guys at the little fly shop alot, and they always say go small, #18 or #20 flys fished on a 7x is the only way to catch fish. Recently though ive been doing well with PT #14 and #16. Im fairly new, so I usally try anything someone suggests, hence the 6x. Funny thing is, from what the llfs guys say, I thought i was fising with tippet too thick. How on earth do you land fish on tippet smaller than 6x, Ive had two large fish on 7x already, both breaking my line. Gonna give the 5x a try tonight. Thanks again
