Al Beatty once said that he can tie an extra half dozen flies per hour by carrying the scissors in his hand at all times instead of laying them down. There are a number of ways to save time. One of them is to put a mark or two on your scissors to measure wing depth when cutting from mallard wing quills. Another is to make yourself one of these devices from a paper clip and an Exacto knife. I measure out all of my nymph wingcases and wings using this tool. Saves a bunch of time when working with goose or mallard wing quills and ensures uniformity on every fly.
