The first few wraps dictate what the rest will do generally. Try wrapping using your fingers not the hackle pliers for the first 2 wraps. This gives you a little more control over the twisting. I dont care who you are sometimes we all get some bards around the hook eye. If your having trouble make sure that you are leaving enough room behind the hook eye for a good finish, second pull the barbs back away from the shank before tying the hackle down. Good Luck I hope this helps.
