Another crane fly I use with success is nothing but a size 16-18 [Tak's Biot Midge](#) tied with a grey biot wing; yellow thread body and dun hackle. I guess if you wanted to you could add some long hackle fibers for legs but I never bothered.

I don't know if the trout think it's a Crane Fly or not but I do and if they take it ; I can figure I'm smarter than them
